

Weekly Report (2017.7.3-2017.7.9)

Done

1) Rebuild the project framework. Backend, still use Node.js and MySQL. When it comes to the frontend, I try to use Webpack instead of Gulp. The references are as follow:

<https://webpack.js.org/>

2) Implement the web design. In this process, reviewed a lot of html, CSS, layout related content. For instance, BFC(Block formatting context) layout rules <http://www.cnblogs.com/lhb25/p/inside-block-formatting-ontext.html>.

3) Volunteered to participate in hardware resource maintenance work. Start to review Linux commands and practice on the VMWare.

4) Get my offer letter and do some required tests.

To Do

1) Based on the new clear requirement, implement corresponding visual charts.

2) Participate in visual summer school.
